

Caio Oliveira

PROFESSIONAL SUMMARY

Backend Software Engineer with foundational expertise in Python (Flask, Django) and relational databases. Adept at building reusable APIs, writing maintainable tests, and automating deployments through containerised CI/CD pipelines. Fast learner, detail-oriented, and committed to writing secure, scalable services that support business growth.

WORK HISTORY

Nonius Software - Systems & Backend Software Engineer

Porto, Portugal 10/2025 - present

- **Rebuilt the main app of the company's flagship product**, making it much more stable and reducing media loading times by creating a custom media player and improving how the app handles data states of a state machine.
- **Made firmware updates 6x faster** by building an automated upgrade system and a monitoring dashboard, which reduced downtime and made it easier to track system progress and health.
- **Opened up new revenue sources** by adapting the cloud VOD server to run locally on cruise ships, allowing the company to expand into the maritime market for the first time.

Technical Stack: JavaScript, PHP, HTML, Python, MySQL, Shell, Linux OS Servers

Independent Consultant - Full-Stack Developer & UI Designer

Porto, Portugal 09/2024 - 10/2025

- **Delivered 20+ full-stack web solutions** in a 12-month period, serving a wide range of clients from individual portfolios to enterprise e-commerce platforms, which resulted in a 25% increase in client satisfaction.
- **Improved project delivery efficiency by 30%** as measured by time-to-market, by managing the full development lifecycle, including UI/UX design, deployment, and hosting management.

Technical Stack: Figma, React, JavaScript, TypeScript, Next.js, Python, Django, MySQL, PHP, CI/CD Tools
